Single-feature L2 controls · separate norm target for each one-term reference

12 active donor controls + 12 active receiver controls. Each is matched to its selected single-feature edit at 4.5×.
Every edit is applied at layer 22, token 9, with unfrozen attention; actual BF16 intervention norms are printed per trial.

Donor-only additions
Intended L2 = 42.5124

	Actual L2
SELECTED · L22–T941 — Thermal State and Heat Action Gate	**42.5077**
L22–T8 — Numbered List and Paragraph Start Detection	42.5236

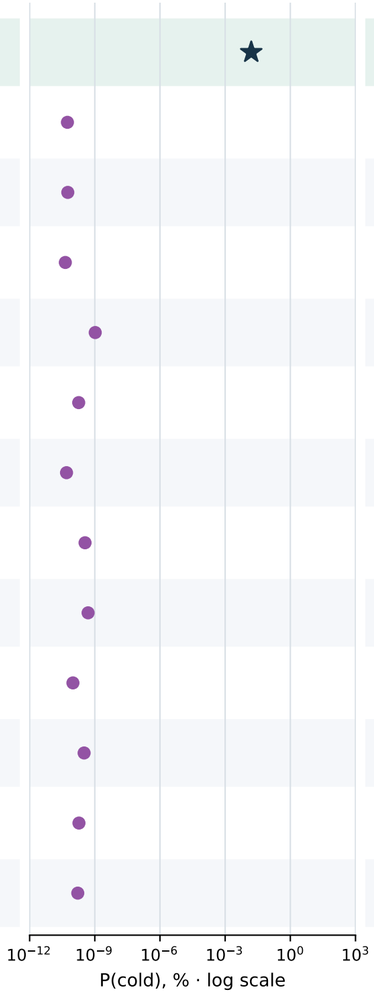
L31–T135 — User Prompt and Response Start	50.8430
L34–T429 — Label unavailable in saved dashboard export	50.8446



These single-feature panels use their own matched norm budgets; they are not comparisons at the selected pair's L2 = 65.3207.
Probabilities are percentages of the full vocabulary. Labels are saved dashboard descriptions; unavailable labels are identified by transform ID.
