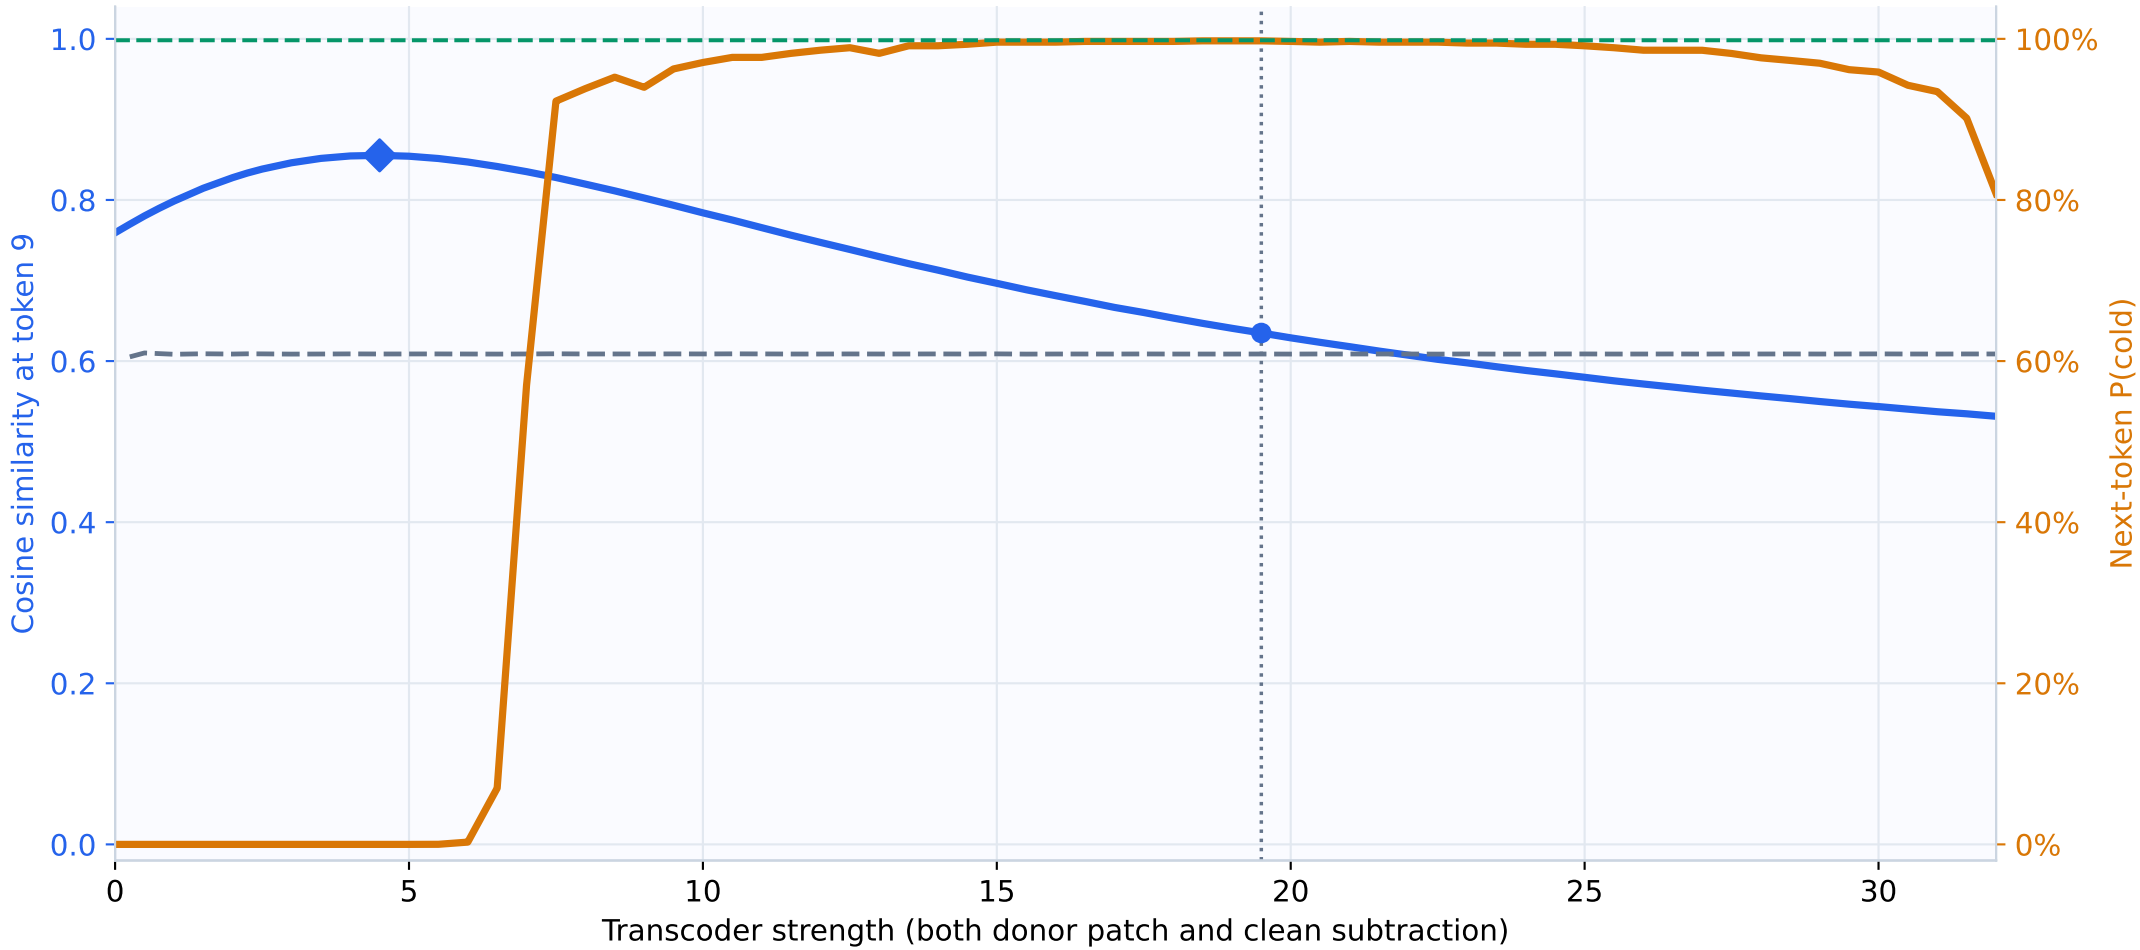
Same answer, how similar is the residual?

Qwen3-4B · token 9 after layer 22 · MOLT strength fixed at 4.5 · attention unfrozen



At transcoder 19.5: residual cosine = 0.6349; change cosine = 0.6088; P(cold) = 99.752%

Peak residual cosine: 0.8554 at strength 4.5; P(cold) = 0.0000619%

- Cosine: edited residual vs. fixed MOLT residual
- Cosine: changes from clean residual
- Transcoder P(cold)
- Fixed MOLT P(cold): 99.827%
